

World Leading Machine Vision Solutions Provider

We gave you an insight into a tray-to-tray based vision handler, TR1100i, in our last newsletter and we'd like to introduce you to another model under Tray to Reel series this time.

Another award-winning machine, **TR1100i**, comes with built in taping module and tri-nozzle for faster unit pickup which translates to higher throughput of up to 18K (tray to tape).

**TR1100i** possesses 1X14 pick up nozzles for packages in the semiconductor line that allows the higher throughput up to 33K. Apart from the immense efficiency, it's auto pitching mechanism and smart taper conversion system provide expeditious nozzle pitch and computerised tape range conversions that enable quick conversion time. Furthermore, its Dual Lane Tray Transfer Module reduces transfer-interval and configuration to increase the UPH.

## US Technology Days 2019

Following our roadshow in Mexico last month, we made another appearance in the US this time. As the result of presenting our machines in EAP Office, Dayton, Ohio on 16th September 2019 and Evotest Office, Fremont, California on 24th September 2019, we are beyond thrilled to have received an overwhelming response from all of you. We can't thank you enough for that.

Throughout our industry sharing, you have gained insightful knowledge about our inspection machines that aren't only beneficial to the PCBA market, but for a wider audience as well. For instance, back end semiconductor, final assembly solution, electronic communication systems, and more, all were the essential key takeaways for you within a day. With that, we're delighted to know that everyone did enjoy the entire session to the fullest.

There will be more roadshows coming up in the future. We hope to see you all again soon.
